

Ethernet Leased Lines

Dedicated and reliable connectivity

Our portfolio of fast, reliable, and competitive Ethernet leased line services – with speeds from 100Mbps to 10Gbps – provides a range of options for all sizes and types of business.

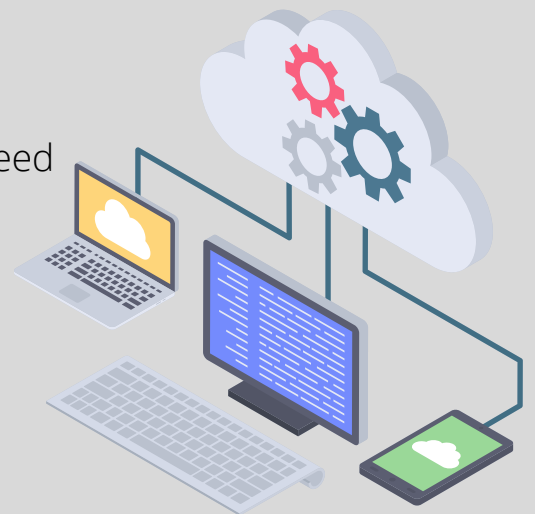

Our chosen connectivity partners ensure we can balance budgets, business requirements, and SLAs to deliver the best level of connectivity available across the UK.

For those requiring business critical solutions, we can provide backup circuits from alternative providers and where achievable diverse routes.

Leased lines are ideal for businesses that always need the assurance of high-speed internet access with the appropriate service level agreements.

Features

- Symmetrical and uncontended bandwidth.
- Guaranteed up and down bandwidth or guaranteed minimum bandwidth with burstable limit.
Flex up in busy periods*
Typical service levels*
- 4-hour response for an on-site engineer.
- 1 hour response, 8 hour fix for faults.
Subject to connectivity provider*

Benefits

Seamless connectivity

Our symmetrical, uncontended bandwidth options, with no usage limits, mean we can deliver the services and speeds required.

Delivering speeds from 100Mbps to 10Gbps supported by 1Gbps to 10Gbps bearers allows the transportation of truly modern communication and data services.

Range of Ethernet Leased Line Providers

We offer services from established UK providers as well as the latest generation alternative networks (AltNets) that deliver the latest technology networks, complementing the reach and availability of the established providers.

Guaranteed service

Guaranteed service with dedicated 24-hour support, a 4-hour on-site engineering response, and rapid fault Fibre Ethernet.

Who Requires a Leased Line?

- Cloud-led businesses
- High data usage applications
- Highly critical environments
- Service organisations
- Peak data flows/seasonal activity
